Explanatory Attachment to Notice of Non-Compliant Amendment

Effective 30 July 2003, amendments filed under 37 CFR 1.121 must be filed using the following rules:

When there is an amendment to the specification, the location of the paragraph or section to be deleted, replaced, or where a new paragraph or section is to be added, must be unambiguously identified. Text of a new paragraph or section should not be underlined.

Deletion of a paragraph or section must only include an instruction to delete, and the location of the paragraph or section. A replacement paragraph or section must be a marked-up version showing the changes. A clean version of any replacement paragraph or section must *not* be submitted in addition to a marked-up version, except when applicant submits a substitute specification.

The amendment to the specification filed 24 February 2005 is non-compliant insofar as the replacement paragraphs are not submitted as a marked-up version showing the changes, i.e. with underlining and bracketing to show the changes. As noted above, a clean version of any replacement paragraph or section must *not* be submitted in addition to the marked-up version.

Current amendment practice is being strictly enforced because amendments are now being "entered" at the Printer when an application is being prepared for issue as a patent as opposed to the previous practice where a docket clerk physically entered the amendment. The current format avoids confusion by the Printer which could result in incorrect subject matter being printed in a patent at the time of issue.
